What does the *i* stand for...

**W**elcome to Brian Moore Guitars, home of the 'iGuitar', where playing guitar is inspirational, imaginative and FUN!

Since 1992 we have focused on designing innovative guitars that blend the very best of art and technology, resulting in an extremely versatile instrument. Our hand-made Custom Shop guitars have been rated among the best available in the world today.

Our i2000 Series and iGuitar products are modeled after our award winning Custom Shop designs, featuring our comfort contoured top and sculpted headstock. They use the same fine components, such as Seymour Duncan pickups and Sperzel tuning machines, and are now available at affordable prices. Every instrument is set-up and inspected in our LaGrange, NY, Custom Shop facility.

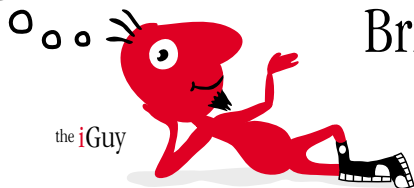

The iGuitar embraces technology that offers every guitarist new and creative musical possibilities. It features built-in RMC piezo for warm, authentic acoustic tone and fast tracking 13-pin access to explore all of the fun sounds from the latest 13-pin compatible systems from Roland and other manufacturers.

There is a growing trend in technology based guitar products. The iGuitar allows your guitar to be the primary controller for your home or project studio environment and can expand your live performance possibilities.

You are about to enter a world where the guitar inspires and enhances your musical creativity. Enjoy.

## 1 Great Electric!

(Magnetic Amp)

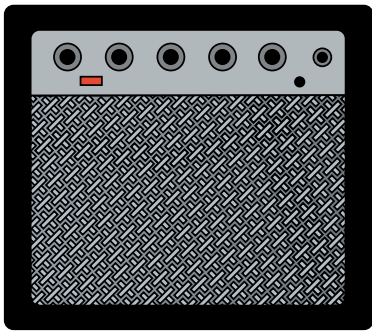

*iGuitar2.13* or  
any 13-pin Model

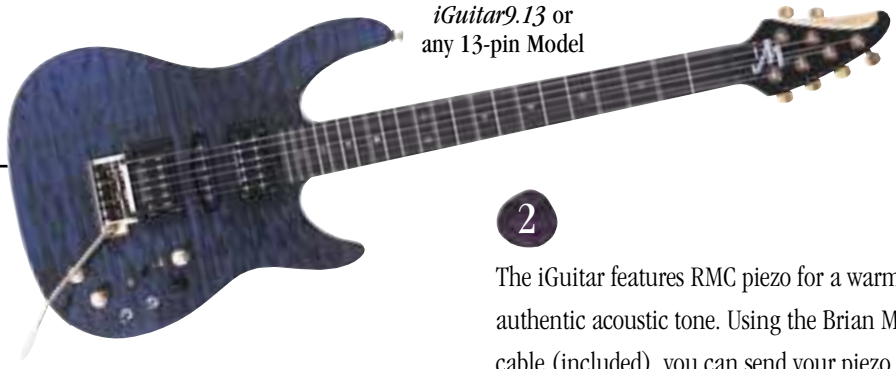

1

All i2000 models feature Seymour Duncan Alnico and JB pickups for warm, harmonic rich tone. Coil tapping in the volume and tone knobs allows for many versatile humbucker and single coil sounds. Plug into your favorite amp using a regular mono guitar cord.

## 2 Piezo Adds Acoustic Tone!

(Magnetic Amp)

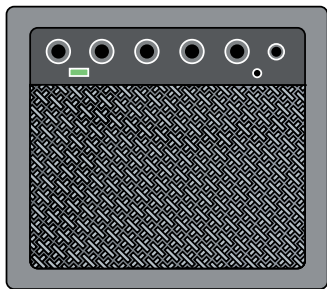

*iGuitar9.13* or  
any 13-pin Model

2

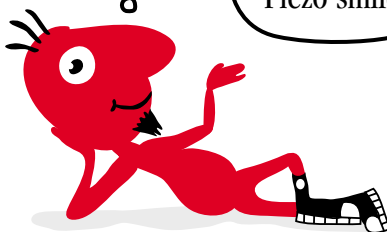

The iGuitar features RMC piezo for a warm, authentic acoustic tone. Using the Brian Moore "Y" cable (included), you can send your piezo pickup to an acoustic amp, mixer or P.A., while sending your magnetic pickups to a regular guitar amp or rig, keeping the integrity of your regular magnetic tone.

(You will get the best authentic acoustic tone by sending the piezo to an acoustic amp, mixer or P.A.)
